Reflections concerning the contamination of Organic Wines by synthetic pesticides

Personnal Experience

- As an organic winemaker, you are totally involved to work as **virtuously as possible**
- We do **not live under a glass**

Consequence of residues

- Above **0.02 mg / kg** leads to a blockage and an +/- longer **investigation procedure** by the Certification Organization

Better management of the contaminations

- Refocusing the subject on each operators' s risk analysis
- Harmonizing a procedure Grid
- Train the controllers
- Operators/farmers must be guided

Through **R**eality, we have to fight **AGAINST FRAUD**.

Through **E**xperience, we have to adapt and make our **REGULATION** evolve to take in consideration the reality of cross contamination.

Through **A**bility, we have to fight dishonesty and **DISTORSION IN REGULATIONS**.

Through **L**oyalty, we still have to make sure our consumers **TRUST** us.

Let's be **Realistic**, ORGANIC FARMING is an established system in term of technics and regulations and have the best chance to reach **Environmental Objectives** and **FARM TO FORK**.

Thank you.
